

## Historical Bill Check

### Past invoices have never been so useful for cashflow.

Energy suppliers are keen to collect monies but less motivated to return any overpayments or give contract reimbursements, especially for any past mistakes.

1 in 10 utility bills contain errors, and our eagle eyed team are excellent at finding these errors.

We will look through your past, paid invoices with a fine tooth comb to see if we can identify any errors or anomalies with our rigorous checks. Upon discovering anything we liaise and negotiate with the energy supplier to arrange the refund of any overpayments from their bank account back into yours. We can go back as far as 6 years to look for any errors.

Our charges are a simple set fee, we won't ask you to share any of the refunds with us and our upfront charge includes all time spent liaising with the supplier and negotiating the contract reimbursement.

So far, we have discovered and returned over £300,000 for our clients.
